TIPS & RESOURCES FOR COVID-19

Hotline for General Public - 877-857-2945

Keeping the workplace safe Encourage your employees to...

Practice good hygiene

- Stop handshaking use other noncontact methods of greeting
- Clean hands at the door and schedule regular hand washing reminders by email
- Create habits and reminders to avoid touching their faces and cover coughs and sneezes
- Disinfect surfaces like doorknobs, tables, desks, and handrails regularly
- Increase ventilation by opening windows or adjusting air conditioning

Be careful with meetings and travel

- Use videoconferencing for meetings when possible
- When not possible, hold meetings in open, well-ventilated spaces
- Consider adjusting or postponing large meetings or gatherings
- Assess the risks of business travel

Handle food carefully

- Limit food sharing
- Strengthen health screening for cafeteria staff and their close contacts
- Ensure cafeteria staff and their close contacts practice strict hygiene

Stay home if...

- They are feeling sick
- They have a sick family member in their home

What every American and community can do now to decrease the spread of the coronavirus

For Business & Industry in Lewisburg and Marshall County, the next few weeks to potentially months will be shaped by the Covid-19 outbreak and the global responses currently taking place. It will be more important than ever for employers of business & industry, large and small, in Marshall County to take measures to help them and their workers survive through this trying time. All employers should be ready to implement strategies to protect their workforce from the coronavirus while ensuring continuity of operations. Download these guides created by the U.S. Chamber of Commerce Foundation based on information provided by the CDC, to learn more about how employers and employees can prepare for and address the impacts of the Coronavirus.

Recommended strategies for employers to use now:

• Actively encourage sick employees to stay home:

- Employees who have symptoms of acute respiratory illness are recommended to stay home and not come to work until they are free of fever (100.4° F [38.0° C] or greater using an oral thermometer), signs of a fever, and any other symptoms for at least 24 hours, without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants). Employees should notify their supervisor and stay home if they are sick.
- ^o Ensure that your sick leave policies are flexible and consistent with public health guidance and that employees are aware of these policies.
- ^o Talk with companies that provide your business with contract or temporary employees about the importance of sick employees staying home and encourage them to develop non-punitive leave policies.
- On not require a healthcare provider's note for employees who are sick with acute respiratory illness to validate their illness or to return to work, as healthcare provider offices and medical facilities may be extremely busy and not able to provide such documentation in a timely way.
- Employers should maintain flexible policies that permit employees to stay home to care for a sick family member. Employers should be aware that more employees may need to stay at home to care for sick children or other sick family members than is usual.

Separate sick employees:

° CDC recommends that employees who appear to have acute respiratory illness symptoms (i.e. cough, shortness of breath) upon arrival to work or become sick during the day should be separated from other employees and be sent home immediately. Sick employees should

cover their noses and mouths with a tissue when coughing or sneezing (or an elbow or shoulder if no tissue is available).

• Emphasize staying home when sick, respiratory etiquette and hand hygiene by all employees:

- OPlace posters that encourage staying home when sick, cough and sneeze etiquette, and hand hygiene at the entrance to your workplace and in other workplace areas where they are likely to be seen.
- ^o Provide tissues and no-touch disposal receptacles for use by employees.
- o Instruct employees to clean their hands often with an alcohol-based hand sanitizer that contains at least 60-95% alcohol, or wash their hands with soap and water for at least 20 seconds. Soap and water should be used preferentially if hands are visibly dirty.
- Provide soap and water and alcohol-based hand rubs in the workplace.
 Ensure that adequate supplies are maintained. Place hand rubs in multiple locations or in conference rooms to encourage hand hygiene.
- OVisit the coughing and sneezing etiquette and clean hands webpage for more information.

Perform routine environmental cleaning:

- Routinely clean all frequently touched surfaces in the workplace, such as workstations, countertops, and doorknobs. Use the cleaning agents that are usually used in these areas and follow the directions on the label.
- No additional disinfection beyond routine cleaning is recommended at this time.
- ° Provide disposable wipes so that commonly used surfaces (for example,

doorknobs, keyboards, remote controls, desks) can be wiped down by employees before each use.

• Advise employees before traveling to take certain steps:

- ^o Check the CDC's Traveler's Health Notices for the latest guidance and recommendations for each country to which you will travel. Specific travel information for travelers going to and returning from China, and information for aircrew, can be found at on the CDC website.
- Advise employees to check themselves for symptoms of acute respiratory illness before starting travel and notify their supervisor and stay home if they are sick.
- ^o Ensure employees who become sick while traveling or on temporary assignment understand that they should notify their supervisor and should promptly call a healthcare provider for advice if needed.
- of If outside the United States, sick employees should follow your company's policy for obtaining medical care or contact a healthcare provider or overseas medical assistance company to assist them with finding an appropriate healthcare provider in that country. A U.S. consular officer can help locate healthcare services. However, U.S. embassies, consulates, and military facilities do not have the legal authority, capability, and resources to evacuate or give medicines, vaccines, or medical care to private U.S. citizens overseas.

Additional Measures in Response to Currently Occurring Sporadic Importations of the COVID-19:

^o Employees who are well but who have a sick family member at home with COVID-19 should notify their supervisor and refer to CDC guidance

for how to conduct a risk assessment of their potential exposure.

olf an employee is confirmed to have COVID-19, employers should inform fellow employees of their possible exposure to COVID-19 in the workplace but maintain confidentiality as required by the Americans with Disabilities Act (ADA). Employees exposed to a co-worker with confirmed COVID-19 should refer to CDC guidance for how to conduct a risk assessment of their potential exposure.
